Serial Nos. Beginning NC59118

ADDENDA (November, 1981)

- 1. FETs Q401 and Q402 on the MC head-amp circuit can accept both (S) and (R) IDSS ranks.
 - a. Therefore it is necessary to use appropriate drain resistors R403 and R404 according to the IDSS rank of the FETs.

2SK155: For IDSS (S) rank; R403, R404 - 820 ohms (conventional value)

> For IDSS (R) rank: R403, R404 - 2.7 kilohms

- b. A 2.2-kilohm resistor is additionally installed between the junction of R438 and R439 on +B circuit of the MC head-amp when (R) rank FET is used.
- c. 2SK155 (R) and 2SK155 (S) are replaceable by 2SK130A (K) and 2SK130A (L) respectively.

Part No. 2SK130A (K) - 302001135 2SK130A (L) - 302001136

- 2. For 220V/240V spec. units, noise cancellers C002 and C003 installed between the primary side of the power supply circuit are eliminated.
 - C001 is changed from 0.047 to 0.022 (PME265MB-522, Part No. 470101136).
- 3. For 220V/240V spec. units, secondary fuse F901 is changed from F1A to T1A (Part No. 345952100).

ADDENDA (Novembre, 1981)

- 1. Les FET Q401 et Q402 du circuit d'ampli frontal MC peuvent accepter les niveaux IDSS (S) et (R).
 - a. En conséquence il est nécessaire d'utiliser des résistances de drainage R403 et R404 adéquates en fonction du niveau IDSS des FET.

2SK155: Pour niveau (S) Ipss; R403, R404 -820 ohms (valeur conventionnelle) Pour niveau (R) IDSS; R403, R404 -2,7 kilohms.

- b. Une résistance additionnelle de 2,2 kilohms est ajoutée entre la jonction de R438 et R439 sur le circuit +B de l'ampli frontal MC lorsque le FET utilisé est de niveau (R).
- c. 2SK155 (R) et 2SK155 (S) sont remplaçables respectivement par 2SK130A (K) et 2SK130A (L).

No. de pièce 2SK130A (K) - 302001135 No. de pièce 2SK130A (L) - 302001136

- 2. Pour les unités alimentées sur 220V/240V, les suppresseurs de bruit C002 et C003 insérés entre le côté primaire du circuit d'alimentation sont éliminés. C001 passe de 0,047 à 0,022 (PME265MB522, No. de pièce 470101136).
- 3. Pour les unités alimentées sur 220V/240V, le fusible secondaire F901 passe de F1A à T1A (No. de pièce 345952100).

Adjustment Procedures

DC BALANCE ADJUSTMENT

Instrument: Oscilloscope

- It will take 3 to 7 seconds for the unit to go into operation after power is turned on.
- 1. Set vertical gain control of the oscilloscope to 0.01 V/ cm, and vertical input switch to GND. Bring the trace to central position on the screen; then set the vertical input switch to DC.
- 2. Connect the oscilloscope to speaker terminals of amplifier. Set volume control of the amplifier to minimum position. Turn on the power,
- When DC output appears on the screen (the trace will shift upwards or downwards as shown in Fig. 1). adjust potentiometer VR601 on the main-amplifier PC board so that the DC output trace falls on zero position (the position set up in step 1).
- 3. Repeat the adjustment in step 2 for the other channel.

Réglage

Instrument: Oscilloscope

l'alimentation.

établie dans le pas 1).

Réglage de l'équilibrage courant continu

• Il prendra 3 à 7 secondes pour l'unité afin de mettre

en opération depuis que l'alimentation soit allumée.

1. Poser la commande de gain vertical de l'oscilloscope à

puis poser l'interrupteur d'entrée verticale à DC.

2. Connecter l'oscilloscope aux bordes de haut-parleur

0.01 V/cm, et l'interrupteur d'entrée verticale à GND.

Apporter la trace à la position centrale sur l'écran;

de l'amplificateur. Poser la commande de volume de

l'amplificateur à la position minimale. Allumer

Lorsque la sortie de CC apparaît sur l'écran (la trace

déplacera en haut ou en bas comme montré sur la Fig.

1), ajuster le potentiomètre VR601 sur la plaquette

d'amplification principale de sorte que la trace de

sortie de CC tombe sur la position zéro (la position

3. Répéter l'ajustage dans le pas 2 pour l'autre canal.

POWER LEVEL INDICATOR CALIBRATION

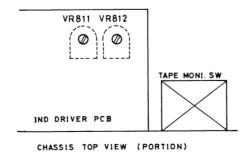

Instruments: Audio Generator, AC Voltmeter, Oscilloscope, Load Resistor (8-ohm, 100 watts, non-inductive)

 Connect the load resistor to the speaker terminal. Connect AC voltmeter and oscilloscope in parallel with the resistor.

Connect the Audio Generator to AUX terminal. Turn the volume control of the unit to maximum. Then feed 1,000Hz (sine wave) signal from Audio Generator and adjust the input level so that AC voltmeter reads 21.9V (60 watts, 8 ohms).

Maintaining this state, adjust the potentiometer VR811 or VR 812 on the Indicator Driver PC board so that the level indicator reads OdB (OdB LED turns on), See Fig. 2.

• Follow the same procedures to adjust the other channel by turning VR812 or VR811.

Adjustment Procedures

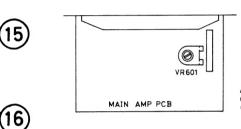

DC BALANCE ADJUSTMENT

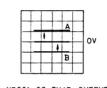

Instrument: Oscilloscope

- It will take 3 to 7 seconds for the unit to go into operation after power is turned on.
- Set vertical gain control of the oscilloscope to 0.01V/ cm, and vertical input switch to GND. Bring the trace to central position on the screen; then set the vertical input switch to DC.
- 2. Connect the oscilloscope to speaker terminals of amplifier. Set volume control of the amplifier to minimum position. Turn on the power.

When DC output appears on the screen (the trace will shift upwards or downwards as shown in Fig. 1), adjust potentiometer VR601 on the main-amplifier PC board so that the DC output trace falls on zero position (the position set up in step 1).

3. Repeat the adjustment in step 2 for the other channel.

ADJUST VR601 SO THAT OUTPUT OF DC VOLTAGE ON SCOPE (A OR B) COMES TO 0V POSITION.

Réglage

Réglage de l'équilibrage courant continu

Instrument: Oscilloscope

- Il prendra 3 à 7 secondes pour l'unité afin de mettre en opération depuis que l'alimentation soit allumée.
- Poser la commande de gain vertical de l'oscilloscope à 0,01 V/cm, et l'interrupteur d'entrée verticale à GND. Apporter la trace à la position centrale sur l'écran; puis poser l'interrupteur d'entrée verticale à DC.
- Connecter l'oscilloscope aux bordes de haut-parleur de l'amplificateur. Poser la commande de volume de l'amplificateur à la position minimale. Allumer l'alimentation.

Lorsque la sortie de CC apparaît sur l'écran (la trace déplacera en haut ou en bas comme montré sur la Fig. 1), ajuster le potentiomètre VR601 sur la plaquette d'amplification principale de sorte que la trace de sortie de CC tombe sur la position zéro (la position établie dans le pas 1).

3. Répéter l'ajustage dans le pas 2 pour l'autre canal.

Fig. 1

POWER LEVEL INDICATOR CALIBRATION

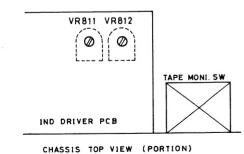

Instruments: Audio Generator, AC Voltmeter, Oscilloscope, Load Resistor (8-ohm, 100 watts, non-inductive)

Connect the load resistor to the speaker terminal.
 Connect AC voltmeter and oscilloscope in parallel with the resistor.

Connect the Audio Generator to AUX terminal. Turn the volume control of the unit to maximum. Then feed 1,000Hz (sine wave) signal from Audio Generator and adjust the input level so that AC voltmeter reads 21.9V (60 watts, 8 ohms).

Maintaining this state, adjust the potentiometer VR811 or VR 812 on the Indicator Driver PC board so that the level indicator reads 0dB (0dB LED turns on). See Fig. 2.

 Follow the same procedures to adjust the other channel by turning VR812 or VR811.

Réglage du indicateur de niveau de puissance

Instruments: un générateur d'audio fréquences, un voltmètre à courant alternatif, un oscilloscope, une résistance de charge (de 8 ohms, 100 watts, non-inductive).

 Connectez la résistance de charge aux bornes des haut-parleurs.

Connectez le voltmètre à courant alternatif et l'oscilloscope en parallèl avec la résistance.

Connectez le générateur aux bornes auxilliaires (AUX) de l'unité.

Tournez le potentiomètre de volume de l'unité au maximum. Puis envoyez un signal de 1.000Hz (onde sinusoïdale) avec le générateur et ajustez le niveau d'entrée de façon que le voltmètre indique une mesure de 21,9V (60 watts, 8 ohms), tout en conservant cet arrangement, réglez le potentiomètre VR811 ou VR812 de la plaquette de l'étage du bord d'attaque de façon que le voltmètre de crête indique une mesure de 0dB (à 0dB les diodes lumineuses "LED"sont éteintes. Voir figure 2.

 Suivez le même procédé pour ajuster l'autre canal en tournant le VR812 ou VR811.

Specifications Caractéristiques

AMPLIFIER SECTION

Continuous Power Output . . . 60 watts* per channel, min. RMS,

both channels driven at 8 ohms from 20 to 20,000Hz with no more than 0.03% total harmonic

distortion

Total Harmonic Distortion. . . No more than 0.03% (continuous

(20 to 20,000Hz from AUX) rated power output) No more than 0.009% (conti-

> nuous 1/2 rated power output) No more than 0.01% (1 watt per

channel power output) Intermodulation Distortion . . No more than 0.02% (continuous

60Hz: 7kHz = 4:1

rated power output) No more than 0.03% (continous

1/2 rated power output) No more than 0.03% (1 watt per

channel power output)

Input Sensitivity Impedance

TUNER, AUX.......150mV/30 kilohms

TAPE MONITOR 1, 2 . . .150mV/30 kilohms

Overload Level (T.H.D. 0.5%, 1kHz)

TUNER, AUX......6V Frequency Response

AUX, TAPE IN 5-70,000Hz, +0dB, -1.0dB (at

1 watt per channel power output)

Tone Control BASS.....±12dB (50Hz)

MID. ±12dB (1kHz) TREBLE ±12dB (15kHz)

LOUDNESS (volume control set at -40dB position)

......+10dB (100Hz), +4dB (10kHz)

Signal-to-Noise Ratio (IHF, A Network)

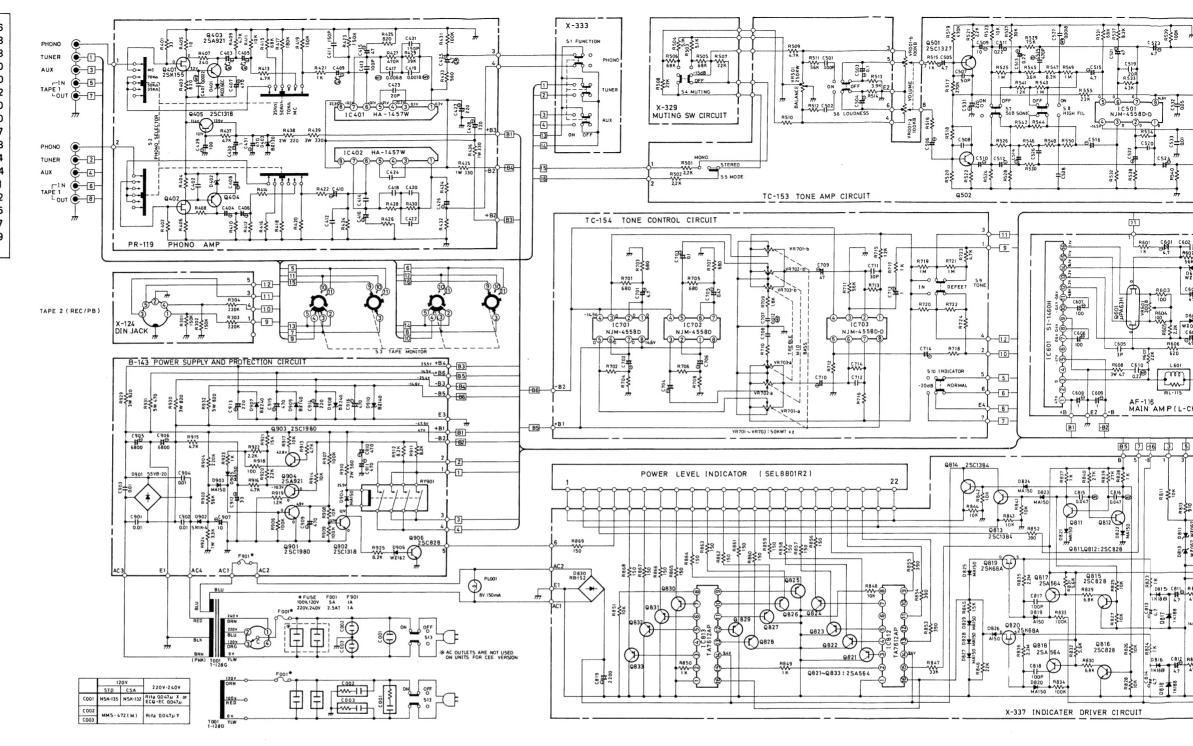

Residual Noise. 1.4mV

MISCELLANEOUS

50Hz or 120, 220, 240V/50-60Hz

Specifications and design subject to possible modification

without notice.

RESISTORS

5% tolerance, 1/4 watts low-noise type carbon film resistors unless otherwise noted.

k Kilohm M....Megohm

CAPACITORS

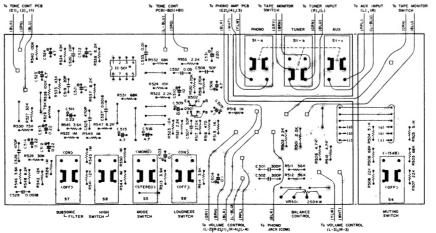

MY....Mylar film capacitor -12- Electrolytic capacitor

LN Low-noise type capacitor

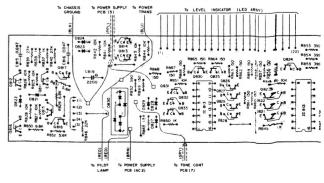

Unless otherwise noted, all capacitance values are expressed in mfd.

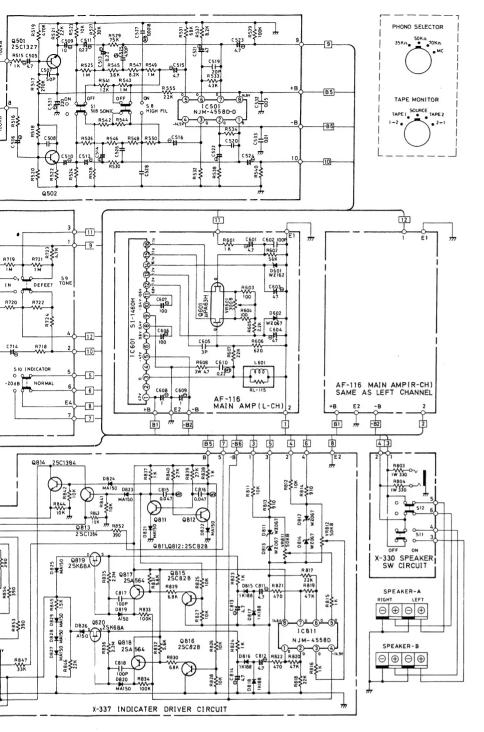

- Voltage reading with VTVM from the point shown to the chassis ground.
- Voltage reading tolerance: within 20%

TONE AMP AND MUTING SWITCH CIRCUIT CIRCUIT D'AMPLIFICATEUR DE TONALITE ET D'INTERRUPTEUR DE SOURDINE

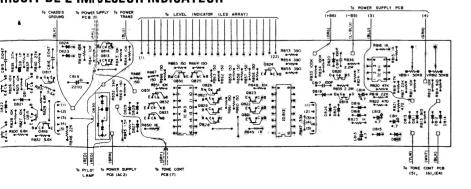

INDICATOR DRIVER CIRCUIT CIRCUIT DE L'IMPULSEUR INDICATEUR

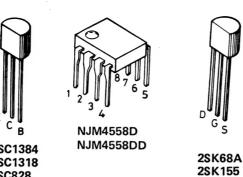

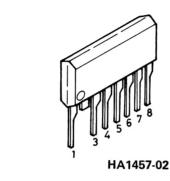

RA-1010 55, 3.17 Terayama

NDICATOR DRIVER CIRCUIT

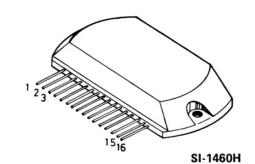

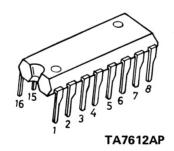

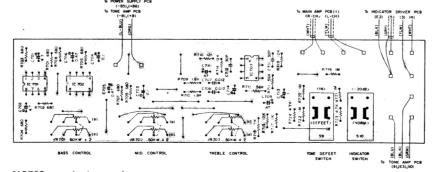

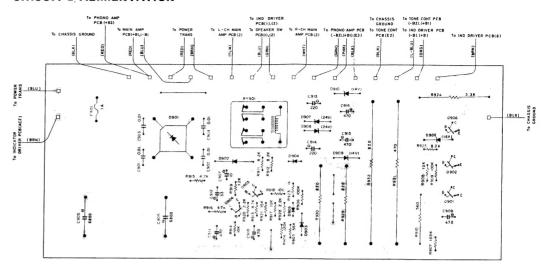

TONE CONTROL CIRCUIT CIRCUIT DE COMMANDE DE LA TONALITE

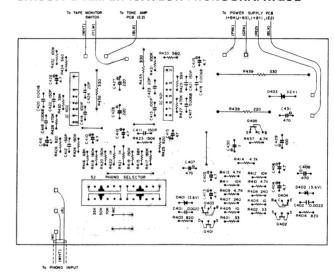

*IC703 must be Low-noise type.

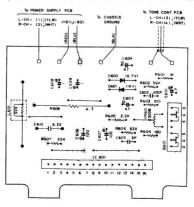

POWER SUPPLY CIRCUIT CIRCUIT D'ALIMENTATION

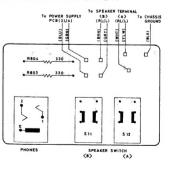

PHONO AMP CIRCUIT CIRCUIT D'AMPLIFICATEUR PHONOGRAPHIQUE

MAIN AMP CIRCUIT CIRCUIT D'AMPLIFICATEUR PRINCIPALE

SPEAKER SWITCH CIRCUIT CIRCUIT DU COMMUTATEUR DE HAUT-PARLEUR
